

IRONS

- Patented, Nitrogen Charged, Hollow Core Construction, #4-PW Hybrid Iron Heads, the first of their kind.
- Thin face, strengthened by pressurized N7 interior, producing powerful, but accurate shots.
- Sole width transitions throughout the set so each club produces desired playability and easy launch angle.
- Anti-drag bevel on sole.
- Progressive top line thickness. Wider on longer irons.
- Progressive offset throughout the set.
- Available in ultra light "Powered" steel or graphite shafts.

**Nitrogen
CHARGED**
TECHNOLOGY

Nitrogen N7

Nitrogen Charging is a newly patented method to reinforce the face of the club without adding any weight.

Compressed nitrogen provides tremendous support to the club face so every golfer can benefit from maximum C.O.R., maximum C.T., maximum Trampoline Effect, and Maximum Smash Factor for incredible distance!

Nitrogen Charging

- ... allows for the thinnest face in golf
- ... promotes increased ball speed
- ... provides superior strength
- ... provides superior performance
- ... produces incredible distance

Why Nitrogen

- Air we breathe is 78% Nitrogen and 21% Oxygen.
- Less Pressure Fluctuation
- Larger molecule
- Dry (less water vapor)
- Unreactive to temperature & pressure
